

# QUALITY AND ENVIRONMENTALLY CONSCIOUS BEHAVIOR

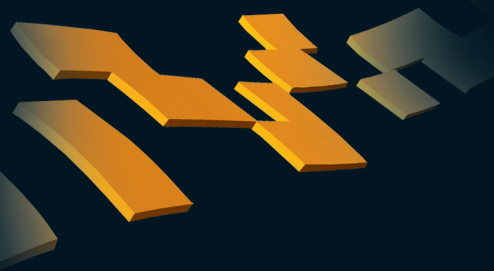

## Our challenge, our strategy

**Quality and environmentally conscious behavior** is essential for increasing the value of our business, as well as for maintaining and enhancing the quality of our living conditions.

**Quality and environmentally conscious behavior** is reflected in the satisfaction of our company's stakeholders, as well as in our enforcement of relevant legislative requirements and even higher environmental standards.

**We are committed** to introducing, adhering to and continuously improving our management system, which is based on ISO 9001:2000, ISO TS 16949: 2002 and ISO 14001:2004.

**Our target oriented and systematic approach** to quality and environmental matters leads to the never-ending improvement of all our processes and helps to reduce negative impacts on the environment.

**Quality and environmentally conscious behavior is the basis for our success.**

◉ **Our customers**

We convince them through performance and innovation. We supply them the best products and services. We ensure that our products comply with their ecological requirements. We serve their requests and needs.

◉ **Our shareholders**

We strive to achieve continuous financial success and to justify their confidence in us.

◉ **Our employees**

We offer a working environment in which determination and performance are rewarded, and foster our employees' individual strengths. It is their commitment, sense of responsibility, expertise and loyalty that secure our success and reduce environmental pollution.

◉ **Our suppliers and other partners**

We expect them to apply the principles of high quality and reliability to their deliveries, and to act in a quality and environmentally responsible manner. Only together can we succeed.

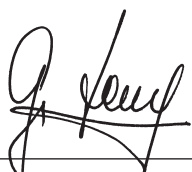

◉ **Our social environment**

We face up to our social responsibilities and carry on an open dialog with all groups of society, particularly with regard to environmental issues.

◉ **Our environment**

We limit potential ecological hazards and risks, and minimize impacts on the environment. We make sure, as early as during the initial design of our products and processes, that negative effects on the environment are avoided as far as possible. We save resources by reducing our consumption of energy, water, raw materials and fuels.
